

Phoenix Living Database at Juelich Forschungszentrum

Juelich Forschungszentrum (Germany) <http://www.fz-juelich.de/portal/>, a member of the Helmholtz Association, brings different research areas together in order to deliver interdisciplinary solutions for the grand challenges facing society. It is an immense privilege to be able to serve the Institute of Bio- & Nanosystems at this prominent institution with the Phoenix Living Database in particular with the newly

developed Reservation Manager. This new module for the market leading manufacturing execution system dedicated for micro- and nanotechnologies is especially suitable for research-focused cleanroom environments. It allows the individual users and researchers to plan their own project in the shared cleanroom facilities. The comparable module named PlanDB will suit a production-oriented cleanroom, as it strategically optimizes the cleanroom's resources with ''just-in-time'' planning capabilities.
